## Opis 60s mobile special operation modes

The Opis 60s mobile supports three special operation modes:

**Mode 1:** Blocks all number with the exception of the quick dial numbers from \*1 to \*9. Emergency calls (112 and 911) are still allowed.

**Mode 2:** Any number can be dialled except

- 110/ 112/ 911 and every other number without a leading zero
- 0137x / 0138x / 018x / 019x / 0900x
- 00x (foreign country calls)

**Mode 3:** Automatically dials the number saved in as quick dial \*1 as soon as the receiver is picked up. All other numbers are blocked!

## table of content

2	Program a quick dial (necessary for protection mode 1 and 3, also see user manual).....	2
3	PROTECTED MODES summary.....	3
4	How to enable PROTECTED MODES.....	4
5	Disable PROTECTED MODE 1 and 2.....	5
6	Disable PROTECTED MODE 3.....	6

==> You may skip 1 and 2 if your phone is not fresh out of the box and you already have programmed a quick dial.

## 1 Bring up the phone

Please follow the steps 1 to 6 in the user manual

==> you are now in NORMAL OPERATION MODE, thus you can place and receive calls.

## 2 Program a quick dial (necessary for protection mode 1 and 3, also see user manual)

To program or change a quick dial number, pick up the receiver and dial:

**Format:** \*02#<quick dial number (1-9)>#<number to be dialled>\*

**Example:** if the number is 08154711 and is to be saved as quick dial #2:

**\*02#2#08154711\***

⇒ if the PIN is accepted the phone rings once.

To use a quick dial number, pick up the receiver and dial:

**Format:** \*<the quick dial number (1-9)>

**Example:** if you would like to connect to quick dial 2: \*2

⇒ you will be connected to the stored number

==> you are still in NORMAL OPERATION MODE, but at least one quick dial number has been programmed

### 3 PROTECTED MODES summary

The phone supports 3 protected modes. In none of the 3 modes it is possible to make modification to the phone setting without you personal PIN.

- **Mode 1:** It is only allowed to use the quick dial numbers from \*1 to \*9. Emergency calls (112 and 911) are still allowed. If no number is programmed at the chosen quick dial position, you will hear the busy signal.
- **Mode 2:** Any number can be dialled except:
  - 110/ 112/ 911 and every other number without a leading zero
  - 0137x / 0138x / 018x / 019x / 0900x
  - 00x (foreign country calls)If you dial a number that is not allowed, you will hear the busy signal.
- **Mode 3:** As soon as you pick up the receiver, the quick dial number saved in position \*1 will be dialled. If no number is stored at quick dial number \*1, you will hear the busy signal. It is not possible to dial any other number.

### 4 How to enable PROTECTED MODES

**IMPORTANT:** In order to set a protected mode **please select a four digit PIN number and make note of** it before you proceed

YOUR PIN: \_ \_ \_ \_

This PIN is the key in order to unlock the phone once it has been set in protected mode.

**NOTE:** If the PIN has been forgotten or lost the phone needs to be returned to the OPIS Technology customer service. Please write to [contact@opis-tech.com](mailto:contact@opis-tech.com) in order to setup for a return shipment.

To enable one of the three protected modes, pick up the receiver and dial:

**Format: \*00#<PM>#<PIN>\***

**Example 1:** if your PIN is 1234 and you wish to enable protected mode 1:

**\*00#1#1234\***

⇒ *if the mode setting is accepted the phone rings once.*

==> *you are now in PROTECTED MODE 1. Thus only your programmed short dial(s) will be functional. Dialling a regular phone number (except emergency call numbers 112 and 911) will result in a busy signal.*

**Example 2:** if your PIN is 1234 and you wish to enable protected mode 2:

**\*00#2#1234\***

⇒ *if the mode setting is accepted the phone rings once.*

==> *you are now in PROTECTED MODE 2.*

### 5 Disable PROTECTED MODE 1 and 2

In order to disable either protected mode **1 or 2**, pick up the receiver and dial **\*00#0#<YOUR-PIN>\***:

**Example 3:** if your PIN is 1234 the following will disable the protected mode: **\*00#0#1234\***

⇒ *if the PIN is accepted the phone rings once.*

==> your phone is now back to NORMAL OPERATION MODE. Thus any number can be dialled.

## 6 Disable PROTECTED MODE 3

In order to disable protection mode **3** to steps are required:

### Step 1: restart phone

1. Turn OFF the phone (switch at the bottom)
2. for 60s mobile: Rotate the dial disc to number 1 or greater and hold it in that position. For keypad version (Pushme mobile): press and hold \*/# key.
3. Turn ON the phone while still holding the disk / buttons
4. Wait for at least 5 seconds still holding the disk /buttons
5. Release the dial disc / buttons

⇒ **The phone shall now audio a dial tone.** Only then you may go ahead with step 2

### Step 2: disable protected mode

1. in order to disable the protected mode: pick up the receiver and dial  
**\*00#0#<YOUR-PIN>\***:

**Example:** if your PIN is 1234 the following will disable the protected mode:

**\*00#0#1234\***

⇒ ***if the PIN is accepted the phone rings once.***

==> your phone is now back to NORMAL OPERATION MODE. Thus any number can be dialled.

**NOTE** *If you aboard the process after step 1 and restart the phone it will still be in protected mode 3.*
